

AskAboutEdu Participant Guide

Use this guide to try AskAboutEdu independently: find a practice, examine its source, ask about your setting, and make a plan you can keep. Choose one of the five cases below. You may copy the sample text exactly or change it to reflect a fictional situation of your own.

[Open AskAboutEdu](#) No account required

What this version can do

- Search or browse 30 WWC practice guides across reading and writing, mathematics, classroom behavior, school improvement, and higher education. No account is required.
- Open a recommendation, its practical steps, evidence label, source passages, and original PDF.
- Ask AI to explain a selected practice, consider its fit, and propose an adjustment for your setting. Continue with follow-up questions.
- Edit a next-step plan, choose Try, Adapt, or Set aside, explain your reason, and download your work.

The collection contains 151 recommendations and 14 subparts, so search results are individual practices, not 30 whole-guide results. Three overview documents are available as supporting reading.

Choose one complete experience

Case	Starting situation	Pages
1	Grade 4 reading longer words	3-4
2	Grade 4 fractions on a number line	5-6
3	Grade 3 classroom transitions	7-8
4	Grade 7 writing from model texts	9-10
5	Postsecondary academic and nonacademic support	11-12

For a 25-30 minute activity: spend about 3 minutes getting oriented, 15-20 minutes completing one case, and 5 minutes saving your work and reflecting. The other cases are alternatives, not a requirement to finish all five.

You are testing the application. There is no single correct AI answer or required positive decision. You may disagree with a suggestion, set a practice aside, or ask the interviewer for help. If comfortable, describe what you are looking for and what feels unclear.

Before you begin

1 Open the app and review your data choices

Keep this guide beside the application in a separate tab or window. A laptop or desktop is easiest. Open **About & data** and read the information provided for your interview. The checkbox **I agree to save this session's interactions** is optional for using the app; follow the study information and your own choice. If a study-code field appears, use the code provided by the interviewer.

Questions and relevant source passages are sent to the AI service when you ask AI, whether or not interaction recording is on. Use the fictional cases here and leave out names, student records, and other identifying details.

2 Find a practice and inspect its source

Open **Explore practices**. Paste the case's search text into **Describe your question or search a topic**, set its grade and role, and leave **Area of practice** at **All areas**. Click **Find practices**. Match the guide title and recommendation below the search results, then click **Explore this practice**.

In **My workspace**, read **A place to start**, **How to carry it out**, and **Fit and evidence**. Click a **Source** button and read **Supporting source**. Use **Open this page in the original PDF** to check the passage. PDF page numbers can differ from the page numbers printed in the guide.

3 Ask about the practice and change the setting

Under **Ask & explore**, paste the case's setting into **Your setting and constraints (optional)**. Paste its first question into **Your question** and click **Send question** once. After the answer arrives, click **Help me adapt this practice**. This button sends its own adaptation request using your selected practice and setting; it does not send custom text left in **Your question**.

For the final turn, replace the setting with the updated setting, paste the follow-up into **Your question**, and click **Send question**. Wait for each answer before submitting another request. The sample route uses three AI requests per case.

4 Read the answer and make your own decision

Look for **From the guide**, **Suggested adaptation**, and **What to keep in mind** when present. Open a citation and compare the claim with its source. The evidence label belongs to the original WWC recommendation; a newly suggested lesson or meeting does not inherit that rating. Save and download your plan using the instructions in each case and on page 13.

Another entry point: **Ask AI about my question** on the home tab starts an AI conversation across the collection. These cases use **Find practices** first so you can choose and inspect a specific practice before asking for an adaptation.

Case 1 Reading longer words

Complete this case in order. Use the text as written for the first search; you can change the setting and follow-up once you have opened the suggested practice.

1 Search for a starting practice

Grade / stage: 4 **Your role:** Classroom teacher

Area of practice: All areas

Paste into **Describe your question or search a topic, then click Find practices**

My fourth graders struggle reading multisyllabic words. How can I build their decoding skills?

2 Open this guide and recommendation

Guide: Providing Reading Interventions for Students in Grades 4-9

Recommendation 1: Build students' decoding skills so they can read complex multisyllabic words.

Original evidence label: Strong. **Starting source location:** PDF page 11.

Look for guidance on modeling a consistent word-reading routine and guiding students as they break apart and blend longer words. Open a source for a claim that matters to your decision.

Click **Explore this practice**, inspect its steps and **Fit and evidence**, then open at least one supporting source before continuing.

If you cannot find the result

Short search phrase

multisyllabic words decoding

Click **Find practices** again. If needed, set **Any grade / stage**, **Any role**, and **All areas**. You can also expand **Browse all 30 guides**, open the guide title above, and click the recommendation text directly. Match the title; the result order may change when you change the wording.

Continue on the next page: explain the practice, adapt it to a setting, and save your own next step.

Case 1 Ask adapt and decide

3 Set the context and ask for an explanation

Paste into Your setting and constraints (optional)

I teach Grade 4. Six students in a small group struggle to decode multisyllabic words. I have 15 minutes, three times a week, and can use paper, a whiteboard, and our existing reading materials. Please focus on one practical starting routine. Any suggested timing or activity should be identified as an adaptation for my setting.

Paste into Your question, then click Send question

Explain the selected decoding recommendation in plain language. What should I model, and what should students practice? Use the linked guide to support your explanation and identify one limit I should consider.

4 Ask for a practical adaptation

After reading the first answer, click **Help me adapt this practice** once. Keep the same practice selected. Read the proposed steps and open a citation before deciding whether the plan fits.

5 Change a constraint and follow up

Replace the text in Your setting and constraints (optional)

I teach Grade 4. Six students struggle to decode multisyllabic words. For the next session, I have only 5 minutes and a whiteboard. I want one manageable starting activity and one thing to observe. This short activity is a local adaptation, not a complete intervention.

Replace Your question, then click Send question

Please simplify the previous plan to one five-minute activity using only a whiteboard. Label it as a proposed adaptation and include one thing I can observe.

6 Make and keep your decision

If **Proposed plan** appears, expand it and select **Use this as my starting draft**. Otherwise, write your next step in **My next action**. Edit it in your own words, select **Try**, **Adapt**, or **Set aside**, and complete **My reason / what I still need to check**. Click **Save my plan**, then **Download plan**. In **About & data**, choose **Download my session** before leaving.

A useful outcome: A decision about one decoding routine, a teacher action, a student action, and an observable sign of how students use the routine.

Reflect: Can you distinguish the guide's decoding recommendation from the AI's proposed five-minute activity? Does the response tell you enough to try the activity without implying that a brief session is a complete intervention?

Try your own variation if time allows: Keep the decoding goal, but change the group size, available materials, or time. Replace the setting text before asking again.

Case 2 Understanding fractions on a number line

Complete this case in order. Use the text as written for the first search; you can change the setting and follow-up once you have opened the suggested practice.

1 Search for a starting practice

Grade / stage: 4 **Your role:** Classroom teacher

Area of practice: All areas

Paste into Describe your question or search a topic, then click Find practices

My Grade 4 students struggle to understand fractions as numbers. How can I use number lines to teach fraction concepts?

2 Open this guide and recommendation

Guide: Developing Effective Fractions Instruction for Kindergarten Through 8th Grade Practice Guide

Recommendation 2: Help students recognize that fractions are numbers and that they expand the number system beyond whole numbers. Use number lines as a central representational tool in teaching this and other fraction concepts from the early grades onward.

Original evidence label: Moderate. **Starting source location:** PDF page 25.

Find the recommendation about fractions as numbers and number lines. Check a source that supports representing or comparing fractions; notice the grade range and the original evidence label.

Click **Explore this practice**, inspect its steps and **Fit and evidence**, then open at least one supporting source before continuing.

If you cannot find the result

Short search phrase

fractions number line

Click **Find practices** again. If needed, set **Any grade / stage**, **Any role**, and **All areas**. You can also expand **Browse all 30 guides**, open the guide title above, and click the recommendation text directly. Match the title; the result order may change when you change the wording.

Continue on the next page: explain the practice, adapt it to a setting, and save your own next step.

Case 2 Ask adapt and decide

3 Set the context and ask for an explanation

Paste into Your setting and constraints (optional)

I teach Grade 4 mathematics to 24 students. Some students think one eighth is larger than one fourth because eight is larger than four. I have 15 minutes and can use a whiteboard, paper, and pencils. I want to focus on fractions between zero and one, using number lines and student explanations.

Paste into Your question, then click Send question

Explain how the selected recommendation uses number lines to help students understand fractions as numbers. What should I draw attention to, and what should students explain? Use the linked guide and distinguish its guidance from any example you create.

4 Ask for a practical adaptation

After reading the first answer, click **Help me adapt this practice** once. Keep the same practice selected. Read the proposed steps and open a citation before deciding whether the plan fits.

5 Change a constraint and follow up

Replace the text in Your setting and constraints (optional)

I teach Grade 4 mathematics to 24 students. For the next lesson, I have 8 minutes and only the classroom whiteboard. I want students to compare one fourth and one eighth on the same zero-to-one number line. Students can explain their thinking aloud to a partner.

Replace Your question, then click Send question

Adapt the previous plan to eight minutes using one whiteboard number line from zero to one. Focus on comparing one fourth and one eighth. Include one question I can ask to hear students' reasoning, and label your activity as a proposed adaptation.

6 Make and keep your decision

If **Proposed plan** appears, expand it and select **Use this as my starting draft**. Otherwise, write your next step in **My next action**. Edit it in your own words, select **Try**, **Adapt**, or **Set aside**, and complete **My reason / what I still need to check**. Click **Save my plan**, then **Download plan**. In **About & data**, choose **Download my session** before leaving.

A useful outcome: A decision about a short number-line activity and a question that lets students explain why one fourth and one eighth have different magnitudes.

Reflect: Does the plan use the same whole and clearly partitioned intervals? Does it ask for reasoning about magnitude, rather than only a memorized rule? Check which details are newly proposed.

Try your own variation if time allows: Change the fractions or choose a small group instead of the whole class. Keep the same whole explicit and update the setting text.

Case 3 Teaching a classroom transition

Complete this case in order. Use the text as written for the first search; you can change the setting and follow-up once you have opened the suggested practice.

1 Search for a starting practice

Grade / stage: 3 **Your role:** Classroom teacher

Area of practice: All areas

Paste into **Describe your question or search a topic, then click Find practices**

How can I co-establish, model, and teach clear classroom behavior expectations with my Grade 3 students?

2 Open this guide and recommendation

Guide: Teacher-Delivered Behavioral Interventions in Grades K-5: A Practice Guide for Educators

Recommendation 1: Co-establish, model, and teach clear expectations for student behavior consistent with schoolwide expectations

Original evidence label: Strong. **Starting source location:** PDF page 14.

Look for the current guide on teacher-delivered behavioral interventions in grades K-5 and its first recommendation. Open a source on co-creating expectations or explicitly teaching and modeling them.

Click **Explore this practice**, inspect its steps and **Fit and evidence**, then open at least one supporting source before continuing.

If you cannot find the result

Short search phrase

classroom behavior expectations

Click **Find practices** again. If needed, set **Any grade / stage**, **Any role**, and **All areas**. You can also expand **Browse all 30 guides**, open the guide title above, and click the recommendation text directly. Match the title; the result order may change when you change the wording.

Continue on the next page: explain the practice, adapt it to a setting, and save your own next step.

Case 3 Ask adapt and decide

3 Set the context and ask for an explanation

Paste into Your setting and constraints (optional)

I teach Grade 3 with 25 students. Transitions from partner work to whole-class instruction are often confusing and noisy. Our school uses the expectations be respectful, be responsible, and be safe. I have 10 minutes to introduce and practice one transition routine. I can use the whiteboard and invite students to suggest examples. I am looking for whole-class instruction, not an individual behavior diagnosis.

Paste into Your question, then click Send question

Explain what it means to co-establish, model, and teach clear expectations in the selected recommendation. How can students contribute, and what should I model and practice with them? Use the linked guide and identify a condition I should check in my classroom.

4 Ask for a practical adaptation

After reading the first answer, click **Help me adapt this practice** once. Keep the same practice selected. Read the proposed steps and open a citation before deciding whether the plan fits.

5 Change a constraint and follow up

Replace the text in Your setting and constraints (optional)

I teach Grade 3 with 25 students. I now have 5 minutes to introduce one partner-work-to-whole-class transition, followed by brief practice over the week. Our expectations are be respectful, be responsible, and be safe. I can use the whiteboard and student suggestions.

Replace Your question, then click Send question

Revise the plan for a five-minute introduction and brief practice across the week. Include student input, one observable expectation, and one thing I can notice during the next transition. Label the schedule as a proposed adaptation.

6 Make and keep your decision

If **Proposed plan** appears, expand it and select **Use this as my starting draft**. Otherwise, write your next step in **My next action**. Edit it in your own words, select **Try**, **Adapt**, or **Set aside**, and complete **My reason / what I still need to check**. Click **Save my plan**, then **Download plan**. In **About & data**, choose **Download my session** before leaving.

A useful outcome: A decision about one transition expectation, how students will help define it, how you will model and rehearse it, and what you will observe next time.

Reflect: Does the response describe teachable, observable behavior and involve students? Does it distinguish introducing a routine from providing repeated teaching and practice?

Try your own variation if time allows: Choose another routine, such as starting independent work or using classroom materials. Preserve your school's actual expectations and update the setting text.

Case 4 Learning to write from model texts

Complete this case in order. Use the text as written for the first search; you can change the setting and follow-up once you have opened the suggested practice.

1 Search for a starting practice

Grade / stage: 7 **Your role:** Classroom teacher

Area of practice: All areas

Paste into **Describe your question or search a topic, then click Find practices**

How can I integrate writing and reading to emphasize key writing features for my Grade 7 students?

2 Open this guide and recommendation

Guide: Teaching Secondary Students to Write Effectively

Recommendation 2: Integrate writing and reading to emphasize key writing features.

Original evidence label: Moderate. **Starting source location:** PDF page 38.

Select recommendation 2, about integrating writing and reading, in Teaching Secondary Students to Write Effectively. Open a source about examining exemplars or connecting reading and writing.

Click **Explore this practice**, inspect its steps and **Fit and evidence**, then open at least one supporting source before continuing.

If you cannot find the result

Short search phrase

integrate writing reading key writing features

Click **Find practices** again. If needed, set **Any grade / stage**, **Any role**, and **All areas**. You can also expand **Browse all 30 guides**, open the guide title above, and click the recommendation text directly. Match the title; the result order may change when you change the wording.

Continue on the next page: explain the practice, adapt it to a setting, and save your own next step.

Case 4 Ask adapt and decide

3 Set the context and ask for an explanation

Paste into Your setting and constraints (optional)

I teach Grade 7 English. Students can find the main idea in a short paragraph but struggle to write a clear topic sentence with supporting details. I have 20 minutes, a teacher-created model paragraph, notebooks, and a whiteboard. I want students to notice a writing feature in the model and then use it in their own writing.

Paste into Your question, then click Send question

Explain the selected recommendation about integrating writing and reading. How should I connect examining a model text with students' own writing? Use the linked guide and separate the recommendation from any activity or model paragraph you create.

4 Ask for a practical adaptation

After reading the first answer, click **Help me adapt this practice** once. Keep the same practice selected. Read the proposed steps and open a citation before deciding whether the plan fits.

5 Change a constraint and follow up

Replace the text in Your setting and constraints (optional)

I teach Grade 7 English. I have 10 minutes, one teacher-created model paragraph, notebooks, and a whiteboard. Focus only on the relationship between a topic sentence and one supporting detail. Students will write a short attempt, not a complete essay.

Replace Your question, then click Send question

Shorten the plan to ten minutes. Include noticing one feature in the model, trying it in students' own writing, and one question for reviewing their attempts. Label this as a proposed adaptation, not a tested ten-minute lesson.

6 Make and keep your decision

If **Proposed plan** appears, expand it and select **Use this as my starting draft**. Otherwise, write your next step in **My next action**. Edit it in your own words, select **Try**, **Adapt**, or **Set aside**, and complete **My reason / what I still need to check**. Click **Save my plan**, then **Download plan**. In **About & data**, choose **Download my session** before leaving.

A useful outcome: A decision about one model-text feature, a short writing attempt, and a review question that checks whether the attempt uses that feature.

Reflect: Does the response make a clear connection between what students notice as readers and what they try as writers? Check whether any sample paragraph is presented as an example rather than a quotation from the guide.

Try your own variation if time allows: Change the writing purpose or model text while keeping the reading-to-writing connection. Describe your new goal in the setting field.

Case 5 Connecting academic and nonacademic support

Complete this case in order. Use the text as written for the first search; you can change the setting and follow-up once you have opened the suggested practice.

1 Search for a starting practice

Grade / stage: Postsecondary **Your role:** Counselor / advisor

Area of practice: All areas

Paste into Describe your question or search a topic, then click Find practices

How can college advising integrate academic and nonacademic supports to help students reach their educational goals?

2 Open this guide and recommendation

Guide: Effective Advising for Postsecondary Students: A Practice Guide for Educators

Recommendation 1: Intentionally design and deliver comprehensive, integrated advising that incorporates academic and non-academic supports to empower students to reach their educational goals.

Original evidence label: Moderate. **Starting source location:** PDF page 14.

Find the first recommendation in Effective Advising for Postsecondary Students. Read its scope and a source about connecting academic and nonacademic supports; note that some guidance concerns institution-level design.

Click **Explore this practice**, inspect its steps and **Fit and evidence**, then open at least one supporting source before continuing.

If you cannot find the result

Short search phrase

college advising academic nonacademic support

Click **Find practices** again. If needed, set **Any grade / stage**, **Any role**, and **All areas**. You can also expand **Browse all 30 guides**, open the guide title above, and click the recommendation text directly. Match the title; the result order may change when you change the wording.

Continue on the next page: explain the practice, adapt it to a setting, and save your own next step.

Case 5 Ask adapt and decide

3 Set the context and ask for an explanation

Paste into Your setting and constraints (optional)

I am a community college advisor. I have a 20-minute meeting with a fictional first-year student who is missing assignments while working evening shifts and is unsure where to seek support. I can check our existing campus resource directory, but I cannot create new services or promise their availability. I want to connect academic planning with relevant nonacademic support and agree on a next step.

Paste into Your question, then click Send question

Explain the selected recommendation about comprehensive, integrated advising. Which parts concern institutional coordination, and which could inform one advising conversation? Use the linked guide and avoid inventing campus services.

4 Ask for a practical adaptation

After reading the first answer, click **Help me adapt this practice** once. Keep the same practice selected. Read the proposed steps and open a citation before deciding whether the plan fits.

5 Change a constraint and follow up

Replace the text in Your setting and constraints (optional)

I am a community college advisor. I now have 10 minutes with a fictional first-year student who is missing assignments while working evening shifts. I have an existing campus resource directory and can verify services afterward. Focus on one academic priority, one support need, and one agreed follow-up.

Replace Your question, then click Send question

Adapt the plan to a ten-minute meeting. Include one opening question, one way to connect an academic priority with a support need, and one agreed follow-up. Treat referrals as options to verify locally and label the meeting plan as a proposed adaptation.

6 Make and keep your decision

If **Proposed plan** appears, expand it and select **Use this as my starting draft**. Otherwise, write your next step in **My next action**. Edit it in your own words, select **Try**, **Adapt**, or **Set aside**, and complete **My reason / what I still need to check**. Click **Save my plan**, then **Download plan**. In **About & data**, choose **Download my session** before leaving.

A useful outcome: A decision about a brief advising conversation, one locally verifiable support option, and an agreed next step. Do not treat a short meeting as equivalent to the guide's full advising approach.

Reflect: Does the answer separate institutional responsibilities from what one advisor can do? Does it ask about the student's priorities and leave campus availability to be checked locally?

Try your own variation if time allows: Change the advising constraint or student goal using a fictional situation. Do not enter a real student's name, record, or identifying details.

Keep your work and share your experience

Save before closing or starting another conversation

- **Save my plan** keeps a plan in the current workspace. It is not an account or a guarantee that you can recover it on your next visit.
- **Download plan** gives you a readable TXT file with your plan, reason, and sources. Open it to confirm your final edits are included.
- **About & data > Download my session** gives you a JSON file containing the current conversation and saved plans. Save your plan first. You can keep this file without understanding its technical structure; this version cannot import it to restore the session.
- Downloads are available without opting into interaction recording. Share files with the interviewer only as agreed. Keep your copies before refreshing, closing, or leaving the app.

If something does not work

- **No matching practice:** use the case's short search phrase, broaden the filters, or browse the guide by title. Each case points to content in this version's collection.
- **Still preparing an answer:** wait for the answer or an error; do not click repeatedly. If it remains stuck for about a minute, tell the interviewer before refreshing.
- **Source-check or service error:** note the message and the question you asked. You may try one shorter question about the selected practice. If it still fails, continue with the source and plan editor and describe what prevented you from using AI.
- **No Proposed plan section:** write or paste a suitable next step from the answer into **My next action** and edit it. Loading an AI draft does not save it automatically.
- **Question limit reached:** continue browsing, checking sources, and editing your plan. Use the remaining-question count shown in the app; **New conversation** does not reset the allowance.

Trying another case: download the current session before clicking **New conversation**, which clears the visible chat. Then set the new search filters, select the new practice, and replace the setting text. A new conversation does not automatically change the selected practice or setting.

What this version does not establish

It does not search WWC Intervention Reports, ERIC, or the wider web. AI answers can contain mistakes even when they include verified quotations. Finding a source does not prove that a new activity will improve outcomes in your setting. There is no sign-in history or automatic session restoration.

Be ready to discuss

What did you decide to try, adapt, or set aside, and why? Which source, if any, affected that decision? Where did you hesitate or need help? What would need to change before this could be useful in your own work? An unresolved question or an unsuitable practice is also a useful result to discuss.
