

Your first experience with AskAboutEdu

Choose one fictional case and work through it at your own pace. Find a teaching practice, inspect its source, try an AI conversation, and save your own decision. Allow about 25-30 minutes for one case.

Open the application in a new tab

What you can do

- Search or browse 30 WWC practice guides, then open an individual recommendation and its source passages.
- Ask AI about a selected recommendation and explore an adaptation for your setting.
- Edit a plan, choose Try, Adapt, or Set aside, and download your work. No account is required.

This is an early prototype. AI requests sometimes return a source-check or service error. Each case includes a way to continue by reading the source and writing your own plan. Completing that route does not mean the AI request succeeded.

Choose one case

Case	Situation	PDF pages
1	Grade 4: reading longer words	3-4
2	Grade 4: fractions on a number line	5-6
3	Grade 3: classroom transitions	7-8
4	Grade 7: writing from model texts	9-10
5	Postsecondary: academic and nonacademic support	11-12

Read **Before you begin**, then follow one case. The other cases are alternatives. Use the supplied text for the first search; you may change the fictional setting later.

What counts as a useful outcome?

A reasoned decision, a source you checked, and a next step or unresolved question. You do not have to agree with the AI or decide to use the practice. Tell the interviewer where you hesitate or need help.

Scope: this version uses the supplied WWC practice-guide collection. It does not search WWC Intervention Reports, ERIC, or the wider web. Evidence labels refer to original recommendations, not newly proposed activities.

Before you begin

Review your data choices

In the application, open **About & data**. Read the study information and choose whether to check **I agree to save this session's interactions**. Recording is optional for using the application. If a study-code field appears, use the code supplied by your interviewer.

When you ask AI, your question, setting and relevant sources are sent to the AI service even if interaction recording is off. Use fictional situations and leave out names, student records and identifying details.

Understand the three tabs

- **Explore practices**: enter a search, set filters, click **Find practices**, and select a result.
- **My workspace**: read the selected practice, inspect sources, use **Ask & explore**, and edit **My next step**. Scroll to see all panels; their positions vary with screen width.
- **About & data**: review data choices and use **Download my session** to keep a copy.

Search results are practices within a guide

The large card title is the recommendation. The smaller text underneath names its guide. Several cards can come from the same guide. In each case, match the large title first, then confirm the guide name underneath.

Typing or changing a filter does not submit a new search. Click **Find practices** and allow the results to update before selecting a card. Use the matching card even if its position changes.

Two buttons, two different actions

- **Send question** sends what is in **Your question**, with your setting.
- **Help me adapt this practice** sends its own adaptation request for the current practice and setting. You do not need to paste another question for that button.

For these cases, use **Find practices** first. The home-page button **Ask AI about my question** starts a conversation across the collection instead of following this selected-practice route.

Connection check: if you see **Disconnected from the server**, the current page cannot submit requests. Preserve any visible work you need, then use **Reload** or open a new application tab. Reconnection can lose the current session; it does not restore a saved account history.

Case 1: Reading longer words

1. Search in Explore practices

Set **Grade / stage** to **4**, **Your role** to **Classroom teacher**, and **Area of practice** to **All areas**.

Paste into: Describe your question or search a topic

My fourth graders struggle reading multisyllabic words. How can I build their decoding skills?

Click Find practices. Wait for the results to update.

2. Match this result card

LARGE TITLE / RECOMMENDATION 1

Build students' decoding skills so they can read complex multisyllabic words.

GUIDE NAME UNDERNEATH

Providing Reading Interventions for Students in Grades 4-9

Original evidence label: Strong. Then click **Explore this practice** in the app.

In **Practices to explore**, match the **large recommendation title** shown above and confirm the **guide name underneath**. Click **Explore this practice** on that same card.

CHECKPOINT

The app opens **My workspace**. The selected practice title and the **Current practice** text under **Ask & explore** should match the large title above. If they do not, return to search and choose the matching card.

3. Inspect the source before asking AI

Read **A place to start** and **How to carry it out**. Expand **Fit and evidence**. Click a **Source · p.** button and read the **Supporting source** panel. Use **Open this page in the original PDF** to inspect that passage, then return to the app tab.

Look for guidance on modeling a consistent word-reading routine and guiding students as they break apart and blend longer words. Open a source for a claim that matters to your decision.

Cannot find the card? Use the short phrase below and click **Find practices** again. If needed, broaden to **Any grade / stage**, **Any role** and **All areas**. Or open **Browse all 30 guides**, expand the guide name shown above, and click recommendation 1 with the matching title.

Only if needed: shorter search text

multisyllabic words decoding

Continue to the conversation steps once the correct practice is open.

Case 1: Ask, adapt and decide

At any AI error: note the message and tell the interviewer. Skip the remaining AI steps and go to **step 7** to write your own plan from the practice and sources. Do not ask about a previous answer or plan that never appeared.

4. Add your setting and send one question

In **My workspace > Ask & explore**, check **Current practice**, then complete both fields below.

Paste into: Your setting and constraints (optional)

I teach Grade 4. Six students in a small group struggle to decode multisyllabic words. I have 15 minutes, three times a week, and can use paper, a whiteboard, and our existing reading materials. Please focus on one practical starting routine. Any suggested timing or activity should be identified as an adaptation for my setting.

Paste into: Your question

Explain the selected decoding recommendation in plain language. What should I model, and what should students practice? Use the linked guide to support your explanation and identify one limit I should consider.

Click Send question once. Wait for an answer or error; do not click repeatedly.

5. If an answer appears, request an adaptation

Read the answer and expand a citation to inspect its quoted passage. Keep the same setting and click **Help me adapt this practice** once. Wait for the result. Suggested activities are proposals for you to evaluate.

6. If a plan or activity appears, change one constraint

Replace: Your setting and constraints (optional)

I teach Grade 4. Six students struggle to decode multisyllabic words. For the next session, I have only 5 minutes and a whiteboard. I want one manageable starting activity and one thing to observe. This short activity is a local adaptation, not a complete intervention.

Replace: Your question

Please simplify the previous plan to one five-minute activity using only a whiteboard. Label it as a proposed adaptation and include one thing I can observe.

Click Send question once. If there is no previous plan or activity, skip to step 7.

7. Make your own decision and keep it

If a useful **Proposed plan** appears, expand it and click **Use this as my starting draft**. Otherwise, click **Start my plan** and write in **My next action**. Either way, edit your next step, select **Try**, **Adapt** or **Set aside**, and complete **My reason / what I still need to check**.

Click **Save my plan** and look for **Saved in this workspace**. Click **Download plan** for a TXT file. Then open **About & data > Download my session** for a JSON file. Keep both before closing; loading a draft alone does not save it.

CHECKPOINT

Outcome to discuss: A decision about one decoding routine, a teacher action, a student action, and an observable sign of how students use the routine.

Case 2: Understanding fractions on a number line

1. Search in Explore practices

Set **Grade / stage** to **4**, **Your role** to **Classroom teacher**, and **Area of practice** to **All areas**.

Paste into: Describe your question or search a topic

My Grade 4 students struggle to understand fractions as numbers. How can I use number lines to teach fraction concepts?

Click Find practices. Wait for the results to update.

2. Match this result card

LARGE TITLE / RECOMMENDATION 2

Help students recognize that fractions are numbers and that they expand the number system beyond whole numbers. Use number lines as a central representational tool in teaching this and other fraction concepts from the early grades onward.

GUIDE NAME UNDERNEATH

Developing Effective Fractions Instruction for Kindergarten Through 8th Grade Practice Guide

Original evidence label: Moderate. Then click **Explore this practice** in the app.

In **Practices to explore**, match the **large recommendation title** shown above and confirm the **guide name underneath**. Click **Explore this practice** on that same card.

CHECKPOINT

The app opens **My workspace**. The selected practice title and the **Current practice** text under **Ask & explore** should match the large title above. If they do not, return to search and choose the matching card.

3. Inspect the source before asking AI

Read **A place to start** and **How to carry it out**. Expand **Fit and evidence**. Click a **Source • p.** button and read the **Supporting source** panel. Use **Open this page in the original PDF** to inspect that passage, then return to the app tab.

Find the recommendation about fractions as numbers and number lines. Check a source that supports representing or comparing fractions; notice the grade range and the original evidence label.

Cannot find the card? Use the short phrase below and click **Find practices** again. If needed, broaden to **Any grade / stage**, **Any role** and **All areas**. Or open **Browse all 30 guides**, expand the guide name shown above, and click recommendation 2 with the matching title.

Only if needed: shorter search text

fractions number line

Continue to the conversation steps once the correct practice is open.

Case 2: Ask, adapt and decide

At any AI error: note the message and tell the interviewer. Skip the remaining AI steps and go to **step 7** to write your own plan from the practice and sources. Do not ask about a previous answer or plan that never appeared.

4. Add your setting and send one question

In **My workspace > Ask & explore**, check **Current practice**, then complete both fields below.

Paste into: Your setting and constraints (optional)

I teach Grade 4 mathematics to 24 students. Some students think one eighth is larger than one fourth because eight is larger than four. I have 15 minutes and can use a whiteboard, paper, and pencils. I want to focus on fractions between zero and one, using number lines and student explanations.

Paste into: Your question

Explain how the selected recommendation uses number lines to help students understand fractions as numbers. What should I draw attention to, and what should students explain? Use the linked guide and distinguish its guidance from any example you create.

Click Send question once. Wait for an answer or error; do not click repeatedly.

5. If an answer appears, request an adaptation

Read the answer and expand a citation to inspect its quoted passage. Keep the same setting and click **Help me adapt this practice** once. Wait for the result. Suggested activities are proposals for you to evaluate.

6. If a plan or activity appears, change one constraint

Replace: Your setting and constraints (optional)

I teach Grade 4 mathematics to 24 students. For the next lesson, I have 8 minutes and only the classroom whiteboard. I want students to compare one fourth and one eighth on the same zero-to-one number line. Students can explain their thinking aloud to a partner.

Replace: Your question

Adapt the previous plan to eight minutes using one whiteboard number line from zero to one. Focus on comparing one fourth and one eighth. Include one question I can ask to hear students' reasoning, and label your activity as a proposed adaptation.

Click Send question once. If there is no previous plan or activity, skip to step 7.

7. Make your own decision and keep it

If a useful **Proposed plan** appears, expand it and click **Use this as my starting draft**. Otherwise, click **Start my plan** and write in **My next action**. Either way, edit your next step, select **Try**, **Adapt** or **Set aside**, and complete **My reason / what I still need to check**.

Click **Save my plan** and look for **Saved in this workspace**. Click **Download plan** for a TXT file. Then open **About & data > Download my session** for a JSON file. Keep both before closing; loading a draft alone does not save it.

CHECKPOINT

Outcome to discuss: A decision about a short number-line activity and a question that lets students explain why one fourth and one eighth have different magnitudes.

Case 3: Teaching a classroom transition

1. Search in Explore practices

Set **Grade / stage** to **3**, **Your role** to **Classroom teacher**, and **Area of practice** to **All areas**.

Paste into: Describe your question or search a topic

How can I co-establish, model, and teach clear classroom behavior expectations with my Grade 3 students?

Click Find practices. Wait for the results to update.

2. Match this result card

LARGE TITLE / RECOMMENDATION 1

Co-establish, model, and teach clear expectations for student behavior consistent with schoolwide expectations

GUIDE NAME UNDERNEATH

Teacher-Delivered Behavioral Interventions in Grades K-5: A Practice Guide for Educators

Original evidence label: Strong. Then click **Explore this practice** in the app.

In **Practices to explore**, match the **large recommendation title** shown above and confirm the **guide name underneath**. Click **Explore this practice** on that same card.

CHECKPOINT

The app opens **My workspace**. The selected practice title and the **Current practice** text under **Ask & explore** should match the large title above. If they do not, return to search and choose the matching card.

3. Inspect the source before asking AI

Read **A place to start** and **How to carry it out**. Expand **Fit and evidence**. Click a **Source · p.** button and read the **Supporting source** panel. Use **Open this page in the original PDF** to inspect that passage, then return to the app tab.

Look for the current guide on teacher-delivered behavioral interventions in grades K-5 and its first recommendation. Open a source on co-creating expectations or explicitly teaching and modeling them.

Cannot find the card? Use the short phrase below and click **Find practices** again. If needed, broaden to **Any grade / stage**, **Any role** and **All areas**. Or open **Browse all 30 guides**, expand the guide name shown above, and click recommendation 1 with the matching title.

Only if needed: shorter search text

classroom behavior expectations

Continue to the conversation steps once the correct practice is open.

Case 3: Ask, adapt and decide

At any AI error: note the message and tell the interviewer. Skip the remaining AI steps and go to **step 7** to write your own plan from the practice and sources. Do not ask about a previous answer or plan that never appeared.

4. Add your setting and send one question

In **My workspace > Ask & explore**, check **Current practice**, then complete both fields below.

Paste into: Your setting and constraints (optional)

I teach Grade 3 with 25 students. Transitions from partner work to whole-class instruction are often confusing and noisy. Our school uses the expectations be respectful, be responsible, and be safe. I have 10 minutes to introduce and practice one transition routine. I can use the whiteboard and invite students to suggest examples. I am looking for whole-class instruction, not an individual behavior diagnosis.

Paste into: Your question

Explain what it means to co-establish, model, and teach clear expectations in the selected recommendation. How can students contribute, and what should I model and practice with them? Use the linked guide and identify a condition I should check in my classroom.

Click Send question once. Wait for an answer or error; do not click repeatedly.

5. If an answer appears, request an adaptation

Read the answer and expand a citation to inspect its quoted passage. Keep the same setting and click **Help me adapt this practice** once. Wait for the result. Suggested activities are proposals for you to evaluate.

6. If a plan or activity appears, change one constraint

Replace: Your setting and constraints (optional)

I teach Grade 3 with 25 students. I now have 5 minutes to introduce one partner-work-to-whole-class transition, followed by brief practice over the week. Our expectations are be respectful, be responsible, and be safe. I can use the whiteboard and student suggestions.

Replace: Your question

Revise the plan for a five-minute introduction and brief practice across the week. Include student input, one observable expectation, and one thing I can notice during the next transition. Label the schedule as a proposed adaptation.

Click Send question once. If there is no previous plan or activity, skip to step 7.

7. Make your own decision and keep it

If a useful **Proposed plan** appears, expand it and click **Use this as my starting draft**. Otherwise, click **Start my plan** and write in **My next action**. Either way, edit your next step, select **Try**, **Adapt** or **Set aside**, and complete **My reason / what I still need to check**.

Click **Save my plan** and look for **Saved in this workspace**. Click **Download plan** for a TXT file. Then open **About & data > Download my session** for a JSON file. Keep both before closing; loading a draft alone does not save it.

CHECKPOINT

Outcome to discuss: A decision about one transition expectation, how students will help define it, how you will model and rehearse it, and what you will observe next time.

Case 4: Learning to write from model texts

1. Search in Explore practices

Set **Grade / stage** to **7**, **Your role** to **Classroom teacher**, and **Area of practice** to **All areas**.

Paste into: Describe your question or search a topic

How can I integrate writing and reading to emphasize key writing features for my Grade 7 students?

Click Find practices. Wait for the results to update.

2. Match this result card

LARGE TITLE / RECOMMENDATION 2

Integrate writing and reading to emphasize key writing features.

GUIDE NAME UNDERNEATH

Teaching Secondary Students to Write Effectively

Original evidence label: Moderate. Then click **Explore this practice** in the app.

In **Practices to explore**, match the **large recommendation title** shown above and confirm the **guide name underneath**. Click **Explore this practice** on that same card.

CHECKPOINT

The app opens **My workspace**. The selected practice title and the **Current practice** text under **Ask & explore** should match the large title above. If they do not, return to search and choose the matching card.

3. Inspect the source before asking AI

Read **A place to start** and **How to carry it out**. Expand **Fit and evidence**. Click a **Source · p.** button and read the **Supporting source** panel. Use **Open this page in the original PDF** to inspect that passage, then return to the app tab.

Select recommendation 2, about integrating writing and reading, in Teaching Secondary Students to Write Effectively. Open a source about examining exemplars or connecting reading and writing.

Cannot find the card? Use the short phrase below and click **Find practices** again. If needed, broaden to **Any grade / stage**, **Any role** and **All areas**. Or open **Browse all 30 guides**, expand the guide name shown above, and click recommendation 2 with the matching title.

Only if needed: shorter search text

integrate writing reading key writing features

Continue to the conversation steps once the correct practice is open.

Case 4: Ask, adapt and decide

At any AI error: note the message and tell the interviewer. Skip the remaining AI steps and go to **step 7** to write your own plan from the practice and sources. Do not ask about a previous answer or plan that never appeared.

4. Add your setting and send one question

In **My workspace > Ask & explore**, check **Current practice**, then complete both fields below.

Paste into: Your setting and constraints (optional)

I teach Grade 7 English. Students can find the main idea in a short paragraph but struggle to write a clear topic sentence with supporting details. I have 20 minutes, a teacher-created model paragraph, notebooks, and a whiteboard. I want students to notice a writing feature in the model and then use it in their own writing.

Paste into: Your question

Explain the selected recommendation about integrating writing and reading. How should I connect examining a model text with students' own writing? Use the linked guide and separate the recommendation from any activity or model paragraph you create.

Click Send question once. Wait for an answer or error; do not click repeatedly.

5. If an answer appears, request an adaptation

Read the answer and expand a citation to inspect its quoted passage. Keep the same setting and click **Help me adapt this practice** once. Wait for the result. Suggested activities are proposals for you to evaluate.

6. If a plan or activity appears, change one constraint

Replace: Your setting and constraints (optional)

I teach Grade 7 English. I have 10 minutes, one teacher-created model paragraph, notebooks, and a whiteboard. Focus only on the relationship between a topic sentence and one supporting detail. Students will write a short attempt, not a complete essay.

Replace: Your question

Shorten the plan to ten minutes. Include noticing one feature in the model, trying it in students' own writing, and one question for reviewing their attempts. Label this as a proposed adaptation, not a tested ten-minute lesson.

Click Send question once. If there is no previous plan or activity, skip to step 7.

7. Make your own decision and keep it

If a useful **Proposed plan** appears, expand it and click **Use this as my starting draft**. Otherwise, click **Start my plan** and write in **My next action**. Either way, edit your next step, select **Try**, **Adapt** or **Set aside**, and complete **My reason / what I still need to check**.

Click **Save my plan** and look for **Saved in this workspace**. Click **Download plan** for a TXT file. Then open **About & data > Download my session** for a JSON file. Keep both before closing; loading a draft alone does not save it.

CHECKPOINT

Outcome to discuss: A decision about one model-text feature, a short writing attempt, and a review question that checks whether the attempt uses that feature.

Case 5: Connecting academic and nonacademic support

1. Search in Explore practices

Set **Grade / stage** to **Postsecondary**, **Your role** to **Counselor / advisor**, and **Area of practice** to **All areas**.

Paste into: **Describe your question or search a topic**

How can college advising integrate academic and nonacademic supports to help students reach their educational goals?

Click Find practices. Wait for the results to update.

2. Match this result card

LARGE TITLE / RECOMMENDATION 1

Intentionally design and deliver comprehensive, integrated advising that incorporates academic and non-academic supports to empower students to reach their educational goals.

GUIDE NAME UNDERNEATH

Effective Advising for Postsecondary Students: A Practice Guide for Educators

Original evidence label: Moderate. Then click **Explore this practice** in the app.

In **Practices to explore**, match the **large recommendation title** shown above and confirm the **guide name underneath**. Click **Explore this practice** on that same card.

CHECKPOINT

The app opens **My workspace**. The selected practice title and the **Current practice** text under **Ask & explore** should match the large title above. If they do not, return to search and choose the matching card.

3. Inspect the source before asking AI

Read **A place to start** and **How to carry it out**. Expand **Fit and evidence**. Click a **Source · p.** button and read the **Supporting source** panel. Use **Open this page in the original PDF** to inspect that passage, then return to the app tab.

Find the first recommendation in Effective Advising for Postsecondary Students. Read its scope and a source about connecting academic and nonacademic supports; note that some guidance concerns institution-level design.

Cannot find the card? Use the short phrase below and click **Find practices** again. If needed, broaden to **Any grade / stage**, **Any role** and **All areas**. Or open **Browse all 30 guides**, expand the guide name shown above, and click recommendation 1 with the matching title.

Only if needed: shorter search text

college advising academic nonacademic support

Continue to the conversation steps once the correct practice is open.

Case 5: Ask, adapt and decide

At any AI error: note the message and tell the interviewer. Skip the remaining AI steps and go to **step 7** to write your own plan from the practice and sources. Do not ask about a previous answer or plan that never appeared.

4. Add your setting and send one question

In **My workspace > Ask & explore**, check **Current practice**, then complete both fields below.

Paste into: Your setting and constraints (optional)

I am a community college advisor. I have a 20-minute meeting with a fictional first-year student who is missing assignments while working evening shifts and is unsure where to seek support. I can check our existing campus resource directory, but I cannot create new services or promise their availability. I want to connect academic planning with relevant nonacademic support and agree on a next step.

Paste into: Your question

Explain the selected recommendation about comprehensive, integrated advising. Which parts concern institutional coordination, and which could inform one advising conversation? Use the linked guide and avoid inventing campus services.

Click Send question once. Wait for an answer or error; do not click repeatedly.

5. If an answer appears, request an adaptation

Read the answer and expand a citation to inspect its quoted passage. Keep the same setting and click **Help me adapt this practice** once. Wait for the result. Suggested activities are proposals for you to evaluate.

6. If a plan or activity appears, change one constraint

Replace: Your setting and constraints (optional)

I am a community college advisor. I now have 10 minutes with a fictional first-year student who is missing assignments while working evening shifts. I have an existing campus resource directory and can verify services afterward. Focus on one academic priority, one support need, and one agreed follow-up.

Replace: Your question

Adapt the plan to a ten-minute meeting. Include one opening question, one way to connect an academic priority with a support need, and one agreed follow-up. Treat referrals as options to verify locally and label the meeting plan as a proposed adaptation.

Click Send question once. If there is no previous plan or activity, skip to step 7.

7. Make your own decision and keep it

If a useful **Proposed plan** appears, expand it and click **Use this as my starting draft**. Otherwise, click **Start my plan** and write in **My next action**. Either way, edit your next step, select **Try**, **Adapt** or **Set aside**, and complete **My reason / what I still need to check**.

Click **Save my plan** and look for **Saved in this workspace**. Click **Download plan** for a TXT file. Then open **About & data > Download my session** for a JSON file. Keep both before closing; loading a draft alone does not save it.

CHECKPOINT

Outcome to discuss: A decision about a brief advising conversation, one locally verifiable support option, and an agreed next step. Do not treat a short meeting as equivalent to the guide's full advising approach.

Save, recover and reflect

If you are writing a plan without an AI draft

Read the practice and at least one supporting source. In **My next action**, describe your goal, one action, and what you would observe. If the practice does not fit, select **Set aside** and explain the mismatch or what you need to check. You do not have to invent an activity to finish.

Check your saved files

- **Save my plan:** keeps the plan in this active workspace. It does not create a login or a recoverable session history.
- **Download plan:** a readable TXT file. Open it and check that your final action and reason are included.
- **Download my session:** a JSON file of the current conversation and saved plans. Keep it as an export; this version cannot import it to restore the workspace.
- Downloads work with recording off. Share files only as agreed in the study. Refreshing, closing or a server restart can lose the active session.

If something does not work

- **Results do not change:** check that your text was pasted into the application, click **Find practices**, and wait for the update. If disconnected, preserve visible work before reloading.
- **The answer did not pass its source checks:** no answer was displayed for that request. Note the message, skip further AI requests for this case and continue with step 7. This does not establish whether the practice fits your setting.
- **Service error or question limit:** use the same step-7 route. If the app stays on **Reading the sources and preparing an answer...** for about a minute, tell the interviewer before reloading.
- **No Proposed plan:** write your own next step. That section is conditional, not a button that always appears.

Trying another case

Download your work first. **New conversation** clears the visible chat; it does not reset the AI allowance or change your practice and setting. For the next case, set its search filters, select its matching practice, and replace the setting text.

Questions to discuss with the interviewer

What did you decide, and why? Which source affected your decision? Which parts came from the guide, from an AI proposal, or from your own judgment? Where did you need help? What would make this useful in your work?

Keep the evidence in context. A linked quotation does not guarantee that an AI interpretation is correct. A short lesson or meeting you adapt does not inherit the WWC evidence rating of the original recommendation.
